● PRACTICE STAFF

Practice Manager:

Julia Walkley

Office Manager:

Sharon

Practice Nurses:

Helen Potts, Karen Pippett, Karen Eitel,
Diane Campbell, Alex Emerson &
Judy Fielke

Practice Reception:

Anna, Lynne, Toula, Melissa, Valerie, Lyn,
Bee, Rani, Charyne, Jenni & Rebecca

● SURGERY HOURS

Monday to Friday 8.00am – 8.30pm

Saturday & Sunday 9.00am – 1.00pm

Public Holidays 9.00am - 1.00pm

● OAKDEN PHARMACY HOURS

Monday to Friday 8.00am-8.30pm

Saturday & Sunday 9am-1.00pm

● AFTER HOURS & EMERGENCY

Locum Service Tel: **13 SICK (13 74 25)**

● APPOINTMENTS

Consultation is by appointment.

Home Visits. Some Doctors do home visits. Please speak to your regular GP for more information.

Booking a long appointment is important for more complex problems-insurance medical, health review, counselling, a second opinion etc. Please bring all relevant information.

● BILLING ARRANGEMENTS

We are a private billing practice. Information about fees and services are available at reception.

Payment at the time of consultation is required.

Old age pensioners, Veteran Affairs Gold Card Holders and children under 16 will be bulk-billed by most doctors.

There will be a charge for provision of ALL Bandages, Dressings and Procedures.

Please see reception for Dr Oliver Frank's fee levels and billings.

● SPECIAL PRACTICE NOTES

Telephone advice. Most problems are best dealt with in consultation. A doctor is available during normal surgery hours for emergency advice. Our staff are experienced in deciding the appropriate response to any phone request.

Reminder system. Because our practice is committed to preventive care, we may send you an occasional reminder regarding health services appropriate to your care. If you wish to opt out of this, please let us know.

Test results. It is your responsibility to ensure you follow-up test results, particularly when practice staff or your doctor stresses that you do this. Ask reception staff about the best way to go about it.

Medical record confidentiality. This practice protects your personal health information to ensure it is only available to authorised staff members for the intended purposes and to comply with the Privacy Act. See reception for a copy of our Privacy Policy.

Your comments on our medical services are always welcome. We strive to improve for your benefit. Please direct any queries or complaints to the Practice Manager.

Despite our best intentions, we sometimes run late! This is because someone has needed unexpected urgent attention. Thank you for your consideration.

Windsor Village and Oakden Medical Centres are accredited Training Practices for General Practitioners. Working together with GPEX Program, Hospitals and the Royal Australian College of General Practitioners, our very experienced senior doctors provide training, supervision and tutoring for junior doctors.

WELCOME TO SKIN ALIVE CLINIC

We provide skin checks, detection and management of early skin cancer.

For more information please speak to your regular GP.

▷ Please see the Rear Cover for more practice information.

Mobile phones and kids

It is hard to believe that the ubiquitous mobile phone only became widely used in the 1990s and smart phones in the past decade.

Previous generations of parents did not have to contend with managing their children's use of phones. Today there is a view that children should have access but neither can you wind the clock back. Certainly, there is research showing that too much screen time is an issue for children because they tend to exercise less and it can impact on sleep. There is also the additional complication of social media being accessed via mobile phones anywhere, anytime.

Like all parenting, the key is setting simple rules and sticking to them. This is also age related. The notion of the 'electronic babysitter' used to apply to TV but now that can apply to phones. But handing a small child the phone as a way to pacify them is not a great idea. For primary school children, it can be useful to have a phone to ring parents. This can be an older model that can make calls and can't access the internet. Much like TV time can be restricted by parents, so too can total screen time including phones. Ensure phones are not kept in children's bedrooms and are recharged in the kitchen or living room. For older children ensure a net filter is installed. Lead by example and don't be permanently attached to your own phone. Most importantly, don't be afraid to set boundaries and be 'the worst parent ever'. The objections will settle and your children will be better for it.

School refusal can be serious

Children and adolescents who experience severe emotional distress at having to go to school need to be taken seriously. It can lead to considerable absence from school, which in turn can impact on education and job prospects. This is completely different to truancy and is not associated with anti-social behaviour.

School refusal is also completely different to normal anxiety that may precede exams or school camps.

There is no specific known cause. There may be various underlying worries the child has about school work, friendships, bullying, social isolation, conflicts with teachers, separation from parents, parental separation or family grief or trauma. There may be no apparent underlying issue.

Symptoms include tearfulness before school, frequent complaints of somatic symptoms such as headaches, tummy pains or dizziness before school but not on weekends through to tantrums before school.

A general medical check by your GP is important to ensure there are no other underlying medical issues. It is vital to manage the problem early. Parents, teachers, the school and sometimes education bodies have a role. The family as well as the child will need support. There may need to be involvement from the school counsellor (or an independent one).

Create a positive environment at school, especially on arrival, for the child. A flexible return to school program can be instituted. Additional learning support may be needed as may support with socialising.

A good education is important in life. Getting help early is essential for your child and the family. Talk to your GP about any concerns you have.

Avoiding listeria

Listeria is an infection caused by a common bacterium that occurs in the soil and water.

Thus, plants and animals in the food chain can be infected. There are around 65 cases in Australia each year and 10% of these are in pregnant women who are at greatest risk in the third trimester.

Listeriosis increases the risk of still birth, low birth weight and premature labour. Symptoms can be mild or severe with fever, headaches, vomiting and diarrhoea.

While uncommon, it is important to take steps to avoid potential exposure to listeria. Fortunately, this is not difficult and involves not eating 'high risk' foods while pregnant. Foods to avoid are processed delicatessen poultry meats (sliced chicken), soft cheeses (brie, camembert), raw seafood (oysters etc) pre-made sushi, unpasteurised juices and soft serve ice creams.

There are plenty of foods that you can continue to enjoy while pregnant, including hard cheeses, smoked seafood, hard frozen ice cream or gelato, freshly prepared sushi, pasteurised juices and hot deli meats (cooked at over 75C).

When pregnant it is important to maintain a balanced diet. Talk to your GP about any concerns you have and also about both diet and the need (if any) for supplements.

Avoiding listeria is not difficult so there is no need to stress over every mouthful of food you eat.

Dealing with depression

Depression is a common condition affecting as many as one in five Australians. For some it can be an ongoing condition; for others, there may be only an isolated episode. Depression is more than just feeling sad for a day or two. It is feeling miserable for at least two weeks together with lack of enjoyment of usual activities, withdrawal from friends and often sleep and appetite disturbance.

There are no blood tests or scans. Diagnosis is based on the symptoms described.

Treatment is effective and divides into non-pharmacological and pharmacological. There are a number of medications which can be used if needed. Counselling

through a psychologist or counsellor will be of benefit to many. Your GP can refer you.

Lifestyle measures also help. Eating a healthy diet rich in vegetables and less sugar may help. Cut down on alcohol use. Regular exercise is good for mental health. Meditation or guided relaxation can help. Getting enough sleep is also important. Equally do not stress if your sleep pattern takes a while to get back to normal. Switch off screens at least 30 minutes before bed and have a regular night-time routine.

Regular follow up with your GP is important. Changes in treatment may be needed if you are not making improvement. With recovery, medication (if prescribed) can be reduced and then stopped. You should not stop your medication without talking to your doctor.

Watch on glaucoma

Glaucoma affecting one in eight of those over the age of 80 is the second commonest cause of permanent vision loss in Australia.

It is a build-up of pressure in the eye, which eventually damages the optic nerve. Primary open angle glaucoma is the main form. Secondary glaucoma can follow eye trauma or use of some medications such as steroids.

Acute angle closure glaucoma is when the pressure increases rapidly. This is a painful condition and requires immediate medical attention and surgery.

Generally, there are no predictive symptoms. Vision loss can be slow and gradual. Initially side vision is affected.

Risk factors include advancing age, a positive family history, diabetes and short sightedness.

Diagnosis is by checking the pressure of the eyes. This can be done by an optometrist and is recommended regularly for those aged 40 and above. Visual field testing is also done and this can be monitored over time.

Eye drops to lower pressure are the first line of treatment. The type of drops is influenced by what other medical issue you may have. They reduce pressure either by reducing fluid production or improving fluid drainage.

When drops have failed to bring down pressure or administering drops is too difficult, surgical options including laser surgery or open surgery.

PORK CUTLETS WITH ROASTED FENNEL

Pork Cutlets with Roasted Fennel & Apple

Ingredients

- 2 large fennel bulbs or 4 baby fennel bulbs – trimmed and thickly sliced
- 1 Red Delicious apple cut into wedges
- 1 Large red onion or 2 small red onions cut into wedges
- 1 lemon cut into wedges
- 4 Whole garlic cloves unpeeled
- ¼ cup Olive oil
- 4 x 200gms pork cutlets
- ½ cup Apple Cider
- 1 tablespoon Dijon mustard
- 1 cup baby spinach leaves
- Sea salt & freshly ground pepper.
- Chopped flat leaf parsley to serve

Method:

- Preheat oven to 200C
- Toss the fennel, onion, apple, lemon and garlic with 2 tblspns Olive oil. Season with salt and pepper. Place in an oblong casserole dish and roast for 30 minutes until the fennel and onion are tender.
- Rub the pork cutlets with sea salt and freshly ground pepper.
- Heat remaining oil in frypan over medium-high heat. Cook the pork chops in batches for 2 minutes each side or until golden.
- Combine the cider and mustard and add to the pan and cook for a further 2 minutes.
- Pour over the cider sauce and return to the oven. Add the cutlets to the baking dish with the vegetables. Add spinach and toss gently to combine and wilt spinach.
- Roast for a further 5 minutes or until cutlets are cooked through and vegetables are tender.
- Serve vegetables topped with pork cutlets and drizzled with pan juices and parsley to serve.
